

Proof of Execution

Working platform · ECG physiological module · Growing clinical adoption

Deployed platform RapidPAT across 3 trauma centers — 800+ patients validated

ECG hardware module: built, field-tested and integrated during Fighters Program

User base grew substantially — physicians choosing RapidPAT month over month

EU channel partner identified: Douleurs sans frontières (France)

Platform MVP is live

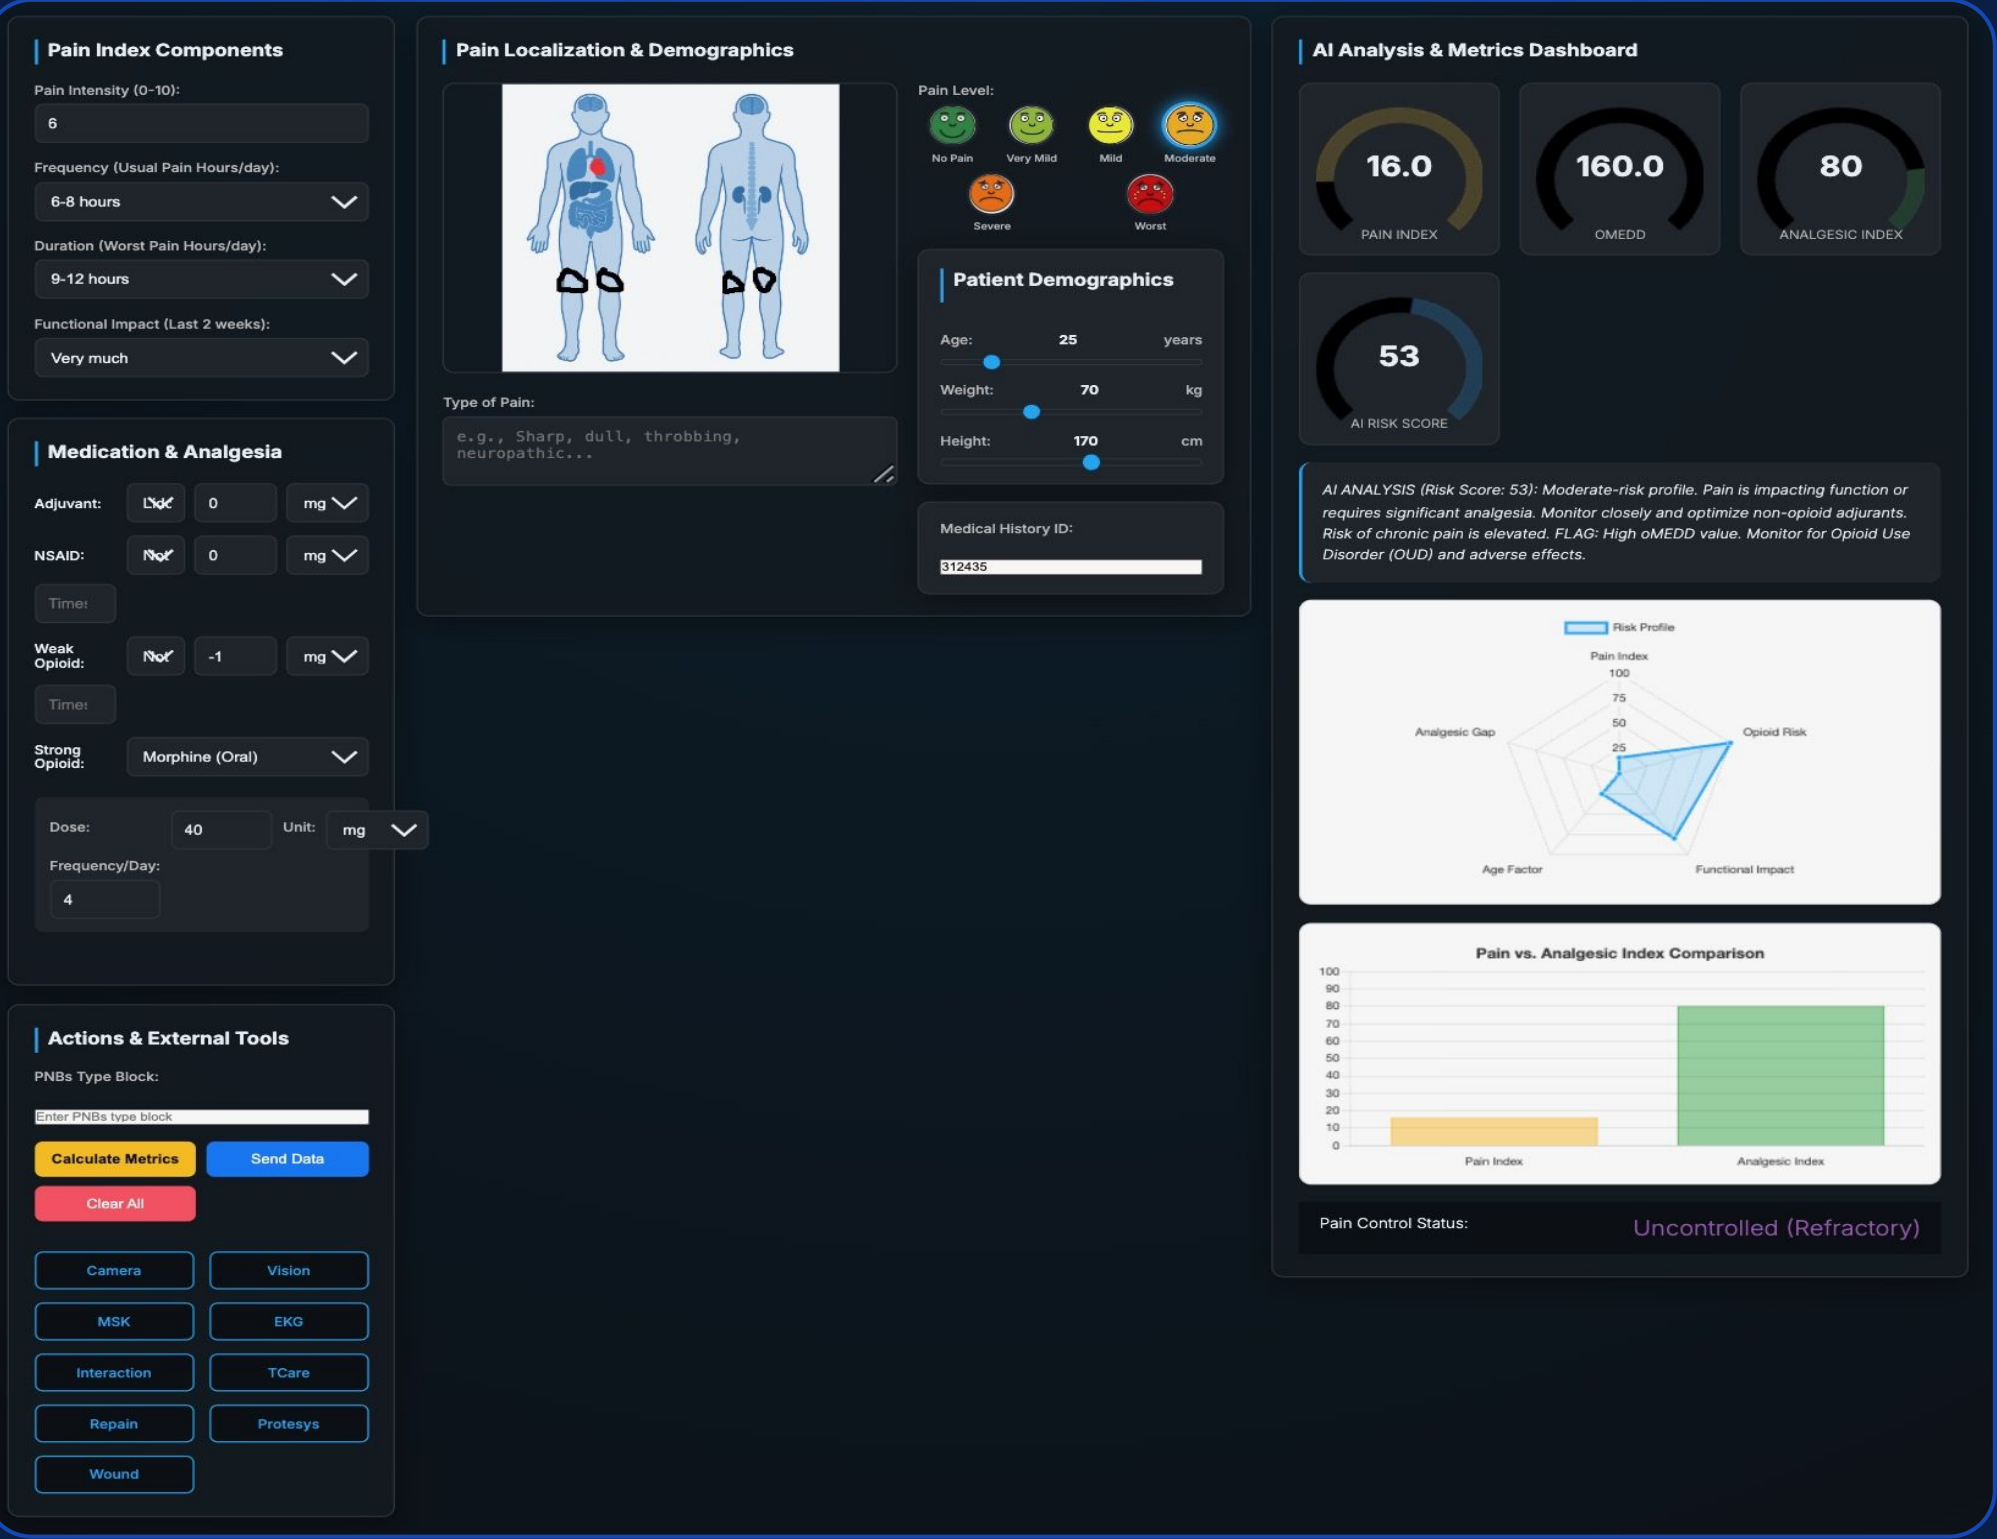

RapidPAT deployed under Ukraine’s Ministry of Health national pain medicine program — evidence the product works at scale

800+
patients validated

$r=0.88$
NRS correlation

AUC 0.81
chronic pain AUC

6
Scopus publications

4 integrated data streams: patient history, facial AI, HRV physiology, wound imaging

Pain Score generated in <30 seconds for any patient — verbal or non-verbal

Medication safety: analgesic index, oMEDD, opioid risk profiling

92% sensitivity on clinical NRS — peer-reviewed across 3 trauma centers

Live deployment: RapidPAT actively used by physicians today

New: ECG physiological module

First physical hardware solution — adds a fourth physiological data stream to the Pain Score algorithm

What the ECG module measures

Heart Rate Variability (HRV) — RMSSD & SDNN on 40-beat sliding window

Real-time ECG signal via wireless chest sensor

Artifact-rejected continuous physiological pain biomarker

Field test results

- **Validated:** ECG adds meaningful precision for sedated or non-verbal patients where facial AI alone is limited
- **Invalidated:** Raw hardware alone not sufficient — physicians want it fused into the unified Pain Score, not a separate reading
- **Result:** ECG output now integrated into the Pain Score algorithm as complementary signal

RapidPAT ECG sensor — field-tested at Station F, Fighters Program June 2026

Physicians are choosing RapidPAT

Strongest growth period to date — physicians adopting across trauma centers and discovering RapidPAT independently

3

trauma centers active

user growth in June 2026 — strongest month to date

Douleurs sans frontières — EU channel partner

What drove user growth

- **Expanded RapidPAT use:** active clinical users grew substantially as physicians across trauma centers adopted the platform organically
- **Strongest growth period:** June 2025 was our highest-ever month of new user activation since RapidPAT went live
- **EU entry point:** Douleurs sans frontières identified as potential channel partner — French association of pain-focused physicians
- **Public web presence:** Launched rapidpat.com — making RapidPAT discoverable and reachable for EU clinicians

AI · Cloud-based clinical platform

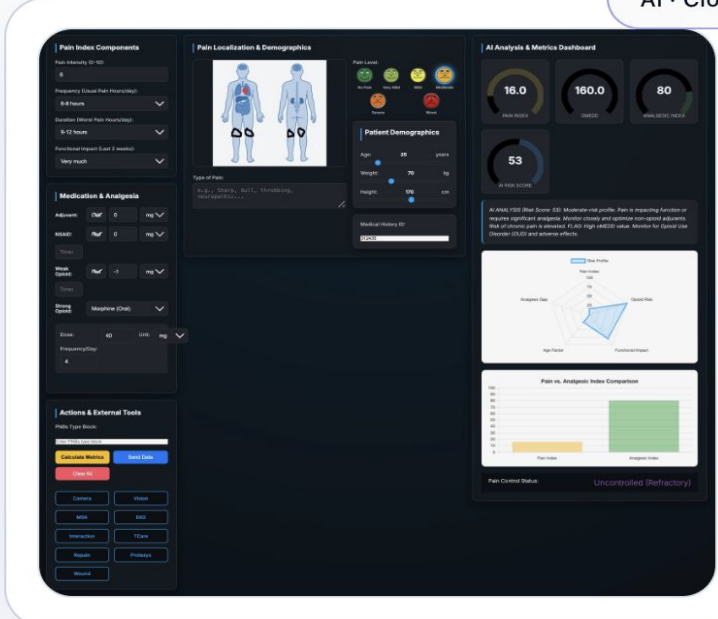

Rapid Pain Assessment Tool

RapidPAT is an AI- and cloud-based platform that objectifies pain assessment in seconds. By turning the most common — yet stubbornly subjective — clinical complaint into a quantifiable, reproducible metric, it gives clinicians a shared language for pain and unlocks safer, faster, evidence-based decisions at scale.

A glimpse of the RapidPAT clinical workspace — pain components, body-map localization, medication tracking and the AI metrics dashboard, all in one screen.

Product execution summary

What we built and validated during the Fighters Program — and where we go next

Metrics — what we shipped

- **Hardware shipped:** built and bench-tested our first ECG pain-monitoring module
- **First field test:** ran the ECG module on live patients alongside our facial-AI and HRV pipeline
- **Platform usage:** active clinical users grew substantially as SAUT expanded across trauma centers
- **Engineering:** completed hardware-software integration for the next pilot phase

Key insights

- **Validated:** ECG signal adds meaningful precision for sedated patients — $r=0.88$ maintained with ECG fusion
- **Invalidated:** standalone ECG device not enough — physicians want a combined multimodal Pain Score
- **Next step:** fold ECG output into unified Pain Score; multi-site field validation in EU
- **Readiness:** feature-complete for EU pilot launch, pending CE/MDR documentation

➡ EU pilot clinics (France)

Partner: Douleurs sans frontières

3 trauma centers targeted Q3–Q4 2025

➡ CE/MDR regulatory submission

Regulatory prep: H1 2026

EHR/API integration layer in parallel

➡ Series A fundraise

Target: H2 2026 on proven EU traction

FDA / US market pathway in parallel
